This tool gives you more control over a selected area of an image and works well for watermarking images. * **Fill/Stroke:** The Stroke tool consists of three boxes (the brush, the pen nib, and the handles). The boxes can be moved around a picture. The Stroke tool can be used to draw freeform lines or paths in an image. A selection can be made, and a path created or deleted. The size of the stroke can be adjusted and set to create different bevel settings. * **Ellipse:** The Ellipse tool is used to draw an ellipse. As the mouse moves over the canvas, the ellipse is created by the pressure and movement of the mouse. * **Rectangle:** The Rectangle tool allows you to draw a square or rectangle on the picture. As with the Ellipse tool, as you move the mouse, the shape is created on the canvas. * **Freeform:** The Freeform tool allows you to create a freeform path on a selection. As you drag the mouse, the path is created. The path is easily edited by moving the handles. * **Text:** With the Text tool, text can be created and placed anywhere on the canvas. The type of font, size, and color can be adjusted. * **Text Box:** The Text Box tool enables you to select an existing text area on the image, or create a new text area. You can move the cursor within the area by clicking and dragging. The type and color of the text can be changed.
