Elements: Don't be fooled! Though it's mostly the same product, the Elements version is missing the ability to edit layer masks. However, that's really not a big deal since masks are easy to do in Photoshop. Mastering Photoshop's Masking Tools Working with layers is an extremely important part of editing images. Layers are a great way to separate out and create your images from one another. Although they may look complicated, layer masks are actually the most important tool in Photoshop. In order for you to paint in the image you're editing, you need a layer. Basically, that is the layer with the paint on it. In the next section, you get a primer on using the various tools to create new layers, as well as view and edit layers already present in your images. You then look at creating new layers and combining existing layers. And, in the last section, you examine how to make some basic layer masks. Mastering the Most Important Layer Tool You use layers to create new ones as you work, and when an image has multiple layers, they have to be masked. Using the layer masking tools is fairly straightforward. You add a new layer with the layer command and choose a color — any color, not necessarily black as is often seen with layer masks (which is simply black with white where no color is selected). The layer mask feature allows you to paint with the color in the layer mask, as shown in Figure 7-2. To make the painting even more accurate, you can mask off areas on the actual layer; you can also manually edit a layer mask or make use of the control bar settings for that layer. Layer masks are particularly important in selecting and editing images. For example, you may have a picture with an image of a skyscraper in the background and want to turn off the actual building in the image. You can use the Lasso tool (covered in the next section) to indicate the image area you want to turn off. Then use the layer mask tool to paint a mask over the building, as shown in Figure 7-3. From there, you can either use the area of the mask that's covered with black, which hides the building, or you can use the layer mask to paint over it, to show it. Layer masks are also used when you're recomposing a picture or combining a series of pictures with just the addition of a new layer. **Figure 7-2

This study examined whether children's ability to store verbal information on the digit span task mediates the effects of family environment on children's ability to recall verbal information in the P-O, C-O, and P-C-O memory tasks. Children's ability to remember verbal information in each of these tasks was assessed in first, second, and third grade classrooms. Results indicated that the relationship between the children's digit span and school achievement could be explained fully by their memory and achievement scores. Also, the relationship between parental education level and children's memory and achievement scores was mediated by children's digit span. These findings confirm previous research and suggest that digit span is a useful indicator of children's ability to store and retrieve verbal information.Q: About scheme with recursion and tail-call I have read some books about Scheme. Facsimile devices have become a convenient and widely used communication method. Advances in facsimile technology have made it possible to transmit facsimile images of printed pages to a facsimile machine for conversion to a digital format for storing in a memory of the facsimile machine. Using appropriate computer programs it is then possible to convert the digital representation of the facsimile page into the actual printed page. Currently known facsimile machines can store a limited number of different pages for conversion to the digital format. This limits the versatility of the facsimile machine in that it is not possible to store facsimile pages of a different type of document (e.g. different length, different type or any other feature of the document) for automatic conversion into a digital format. Also, different sizes of printed pages are not stored and it is impossible to use one facsimile machine to store and then convert pages of two different sizes or formats.BALTIMORE, Md. – Julie Holland took the other pass and darted up the right sideline. She couldn't have known she was about to receive the best news of her professional career. Holland caught the pass, scampered down the field and returned it for the first time in eight years – as an Eagle. In a world full of surprises, Julie Holland knew what that meant. "I looked down at the end of the first half and I said, 'Oh my gosh, I have to get back for the second half.' I've never returned a kickoff before. I've never really thought about it. I was just excited," Holland said. A new season, a new team, a new stadium, a different team, and a new teammate. Holland's journey with the Terps begins in Pompano Beach, Fla., against Florida State on Saturday at 3:30 p.m. on ESPNU. The six-time all-conference pick made her first and only return in a Terp uniform on Oct.

4, 2005 at Penn State. It was a 10-yard return to the Nittany Lions' 26. Holland almost made it three returns in a row in 2007 at East Carolina – where she caught a 4-yard pass from Terrapin alumna Lauren Embree. But ECU came back to force overtime and then the Pirates won in a shootout, 19-17
